

National Public Lands Day

Background

[National Public Lands Day](#) (NPLD) is the nation's largest, single day volunteer effort for public lands. Each year, thousands of Americans come together on the fourth Saturday of September to volunteer their time to improve parks, refuges, local waterways, recreation areas, trails, community gardens, and historical sites. The National Environmental Education Foundation (NEEF) has been coordinating NPLD events across the country with federal, state, and private partners since the event began in 1994. Through NPLD, NEEF works to connect people to the public lands in their community, inspire environmental stewardship, and encourage use of public lands for education, recreation, and general health.

Volunteers at Joint Expeditionary Base Little Creek restore and stabilize dunes in 2016.

DoD Involvement

DoD joined the NPLD partnership in 1999. Through the Legacy Resource Management Program (Legacy Program), DoD provides funding to support natural and cultural resources projects on military installations. Since 1999, DoD has awarded over \$2.5 million to fund more than 500 NPLD projects that have directly benefited military lands throughout the United States.

Objective

NEEF's goal through NPLD is to bring together those who use public lands for recreation with those who care for these lands. NPLD educates Americans about the need for shared stewardship of our valued, irreplaceable natural and cultural resources.

Benefit

Natural and Cultural Resources

NPLD projects enable volunteers to enhance and conserve cultural and natural resources on installations, including manmade assets. For example, Legacy Program funding can be used for small maintenance projects like the repair, rehabilitation, or installation of historic structures, visitor centers, cemeteries, trails, benches, and signage.

Air Force personnel and NPLD volunteers convert rock beds to pollinator gardens at Malstrom Air Force Base in 2015.

Partnerships

NPLD builds partnerships between the public sector and local communities based upon mutual interests in the enhancement and restoration of America's public lands. DoD's Natural and Cultural Resources Programs partner with NEEF to support NPLD projects, leveraging a 1.5:1 return on investment for DoD for 2016 alone. This means that for every \$1 DoD invests, our lands saw a \$1.50 return in volunteer contributions – based on an estimated value of \$10/hour.

Outreach

NPLD provides an opportunity for the military to strengthen its relationship on base and with the local community. By inviting military personnel, their families, and the local community to participate in NPLD projects on installations, all of them can learn about the lands and their elements, and understand the unique challenges surrounding natural and cultural resources management on DoD installations.

DoD Installations

Participating in NPLD provides natural and cultural resources managers an opportunity to complete small installation-specific projects that, due to resource constraints, might not otherwise take place. Typical projects include removing invasive species, planting native trees and pollinator gardens, cleaning up trash, building or maintaining trails or park areas, installing interpretive signage, providing secure and stabilized access paths for recreational and interpretive purposes, and installing or repairing site boundary fencing and edging. Collectively, these efforts help keep installation areas suitable and available for their intended purposes, and often reduce the need for future more intensive and expensive management efforts. More importantly, NPLD provides an opportunity for the on-base and surrounding communities to better understand the unique challenges surrounding natural and cultural resources management on active military installations.

Over several workdays in 2016, volunteers rehabilitated Bellows Air Force Station's Native Hawaiian burial vault.

NPLD Project Selection

Through a competitive proposal process, NEEF awards DoD Legacy Program funds for service projects at approximately 25 to 30 military installation sites across the

Enabling the Mission, Defending the Resources
Department of Defense Natural Resources Program

nation each year. To be eligible for DoD NPLD funding, installations must have some lands open to the public for recreation. Volunteer-based projects emphasize habitat restoration and preservation of historic properties and cultural sites. Funds have been used for equipment, materials, and supplies. Information and application instructions are available on NEEF's website:

[NPLD DoD Awards](#). Applications are due every August.

2016 Summary

NPLD events took place on public lands in all 50 states, the District of Columbia, and U.S. territories. For DoD, NEEF received 37 applications and awarded over \$130,000 to the top 26 applicants; 1,263 volunteers worked approximately 6,045 hours on those sites.

Pollinators

Since 2001, in recognition of the precipitous decline in pollinator populations, DoD and NEEF placed an emphasis on pollinator projects on military installations. Because of this, almost [300 NPLD pollinator projects on military installations](#) – more than 85 percent of NPLD projects on DoD lands – have focused on pollinators. Going forward, other priorities will be featured.

At Fort Bragg, volunteers removed invasive plants and installed pollinator beds.

Future Priorities

In 2016, NPLD emphasized cultural enhancement projects to help commemorate the 50th anniversary of the National Historic Preservation Act. In 2018, DoD NPLD projects will highlight efforts that support and relate to the 100 year anniversaries of the Migratory Bird Treaty Act – which has arguably saved billions of birds, and Armistice Day – which marked the end of World War I.

Accomplishments

Through NPLD, military families, school children, and interested neighbors have improved habitats for bees, birds, bats, and insects; removed invasive plants; restored river beds and planted aquatic vegetation; enhanced dunes and

beach habitats; built and maintained trails and wildlife viewing areas; planted native trees and wildflowers; cleaned up and conserved burial sites and cemeteries; improved historic properties and landscapes; and installed educational and interpretive signage. DoD's Legacy Program received a 1999 Hammer Award from then Vice President Gore for its participation in, and support of, NPLD.

Following are a few highlights from DoD NPLD efforts:

- **Fort Custer Training Center (2015):** volunteers developed wheelchair accessible wildlife viewing stations and a native pollinator plot.
- **Marine Corps Air Ground Combat Center (2016):** volunteers helped to expand the Cultural Heritage Garden at the Archaeology and Paleontology Curation Center.
- **Umatilla Army Depot (2015):** volunteers installed and upgraded burrows for burrowing owls, a species of concern in the western U.S.
- **Fort Polk Cultural Resources Office (2016):** volunteers cleared underbrush and saplings around graves, and added a fence around the Old Hunt Cemetery.
- **Fort McClellan Army National Guard Training Center (2014):** volunteers installed sportsmen blinds with wheelchair accessible trails for disabled hunters.
